10.5: Angles related to a circle

Ms. Kresovic Tuesday, January 26, 2016

Objectives

After studying this section, you will be able to

- Determine the measures of central angles
- Determine the measures of inscribed and tangent-chord angles
- Determine the measures of chord-chord angles
- Determine the measures of secant-secant, secant-tangent, and tangent-tangent angles

Angles with Vertices at the Center of a Circle

The measure of an angle whose sides intersect a circle is determined by the measure of its intercepted arcs. The location of the vertex of each angle is the key to remembering how to compute the measure of the angle.

An angle with its vertex at the center of a circle is a central angle, already defined to be equal in measure to its intercepted arc (Section 10.3).

In \bigcirc O, $\widehat{AB} = 50^{\circ}$, so $m \angle AOB = 50$.

Angles with Vertices on a Circle

Two important types of angles whose vertices are on a circle are shown below.

∠HKM is an inscribed angle.

∠PQR is a tangent-chord angle.

Definition

An inscribed angle is an angle whose vertex is on a circle and whose sides are determined by two chords.

Definition

A tangent-chord angle is an angle whose vertex is on a circle and whose sides are determined by a tangent and a chord that intersect at the tangent's point of contact.

Theorem 86

The measure of an inscribed angle or a tangentchord angle (vertex on a circle) is one-half the measure of its intercepted arc.

The proof of Theorem 86 for inscribed angles is unusual because three cases must be considered. Shown below are some key steps for each case in the proof that $m \angle BAC = \frac{1}{2}(m\widehat{BC})$.

Example 1

Case 1: The center lies on a side of the angle.

1 m∠BOC = mBC $\angle BOC = \angle BAC + \angle ABO$,

so $m \angle BOC = 2(m \angle BAC)$

Given: $\widehat{mAC} = 112$

Find: m∠B

 $m \angle B = \frac{1}{2}(m\widehat{AC})$ $=\frac{1}{2}\cdot 112$

= 56

Case 2: The center lies inside the angle.

1 Use case 1 twice. 2 Add \angle s and arcs.

Case 3: The center lies outside the angle.

1 Use case 1 twice. 2 Subtract ∠s and

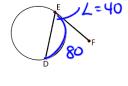

Example 2 Given: FE is tangent at E. $\widehat{mDE} = 80$

Find: m∠DEF $m \angle DEF = \frac{1}{2}(m\widehat{DE})$

= 40

Angles with Vertices Inside, but Not at the Center of, a Circle

One type of angle other than a central angle has a vertex inside a

Definition

A chord-chord angle is an angle formed by two chords that intersect inside a circle but not at the

∠CPD is one of four chord-chord angles formed by chords $\overline{\text{CF}}$ and $\overline{\text{DE}}$ in circle O.

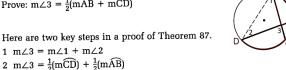

Theorem 87

The measure of a chord-chord angle is one-half the sum of the measures of the arcs intercepted by the chord-chord angle and its vertical angle.

Notice that one-half the sum of the arc measures is the same as the average of the arc measures.

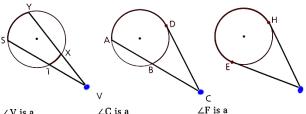

Given: $\angle 3$ is a chord-chord angle. Prove: $m \angle 3 = \frac{1}{2}(m\widehat{AB} + m\widehat{CD})$

Here are two key steps in a proof of Theorem 87.

Angles with Vertices Outside a Circle

There are three types of angles having a vertex outside a circle and both sides intersecting the circle.

secant-secant angle.

Definition

∠C is a secant-tangent angle.

tangent-tangent angle.

A secant-secant angle is an angle whose vertex is outside a circle and whose sides are determined by

two secants.

A secunt-tangent angle is an angle whose vertex is Definition outside a circle and whose sides are determined by a

secant and a tangent.

A tangent-tangent angle is an angle whose vertex is Definition

outside a circle and whose sides are determined by

two tangents.

The measure of a secant-secant angle, a secant-Theorem 88 tangent angle, or a tangent-tangent angle (vertex

outside a circle) is one-half the difference of the measures of the intercepted arcs.

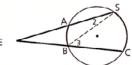

Key steps in a proof of Theorem 88 for secant-secant angles follow.

Prove: $m\angle E = \frac{1}{2}(m\widehat{SC} - m\widehat{AB})$

1 $m\angle 3 = m\angle E + m\angle 2$; solve for $m\angle E$.

2 m $\angle 2 = \frac{1}{2}(m\widehat{AB}); m\angle 3 = \frac{1}{2}(m\widehat{SC})$

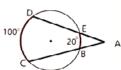

3 Substitute and simplify.

Example 1

Find m∠A.

$$m\angle A = \frac{1}{2}(\widehat{mCD} - \widehat{mBE})$$
$$= \frac{1}{2}(100 - 20)$$

Example 2

Find m∠F.

$$\widehat{m}$$
 = 360 - 100 - 60
= 200

$$m \angle F = \frac{1}{2}(m)\widehat{K} - m\widehat{H}\widehat{K})$$

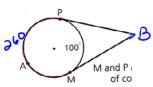

= $\frac{1}{2}(200 - 60)$
= 70

Example 3

Find m∠Q.

$$\widehat{\text{mMAP}} = 360 - 100 = 260$$
 $\underline{\text{m}}\angle Q = \frac{1}{2}(\widehat{\text{mMAP}} - \widehat{\text{mMP}})$
 $= \frac{1}{2}(260 - 100)$

Angle-Arc Summary

Central Angle

m∠KOJ = mĴŔ

 $m \angle DEC = \frac{1}{2}(m\widehat{AB} + m\widehat{CD})$ Vertex at center ⇒ equal Vertex inside ⇒ half the sum

Inscribed Angle

 $m \angle Q = \frac{1}{2}(m\widehat{PR})$

 $m \angle T = \frac{1}{2}(m\widehat{ST})$ Vertex on circle \Rightarrow half the arc

Secant-Secant Angle

 $m \angle P = \frac{1}{2}(m\widehat{CD} - m\widehat{AB})$

Tangent-Tangent Angle

 $m \angle P = \frac{1}{2}(m\widehat{SXT} - m\widehat{ST})$

Secant-Tangent Angle

 $m \angle P = \frac{1}{2} (m\widehat{RT} - m\widehat{QT})$

Vertex outside circle ⇒ half the difference

From the ASN:

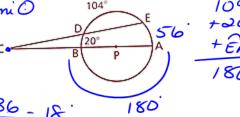

If the vertex of the angle	Then use this formula to
is the circle	find the angle's measure:
IN	m/: 1+1
ON ON	$m \angle = \frac{C}{a}$
OUT	$m \angle = \frac{1}{2}$

Class Examples

Given: AB is a diameter of ⊙P. Problem 1 $\widehat{BD} = 20^{\circ}, \widehat{DE} = 104^{\circ}$

Find: m∠C

First find mEA. = 5% Solution

out

Find y. Problem 2

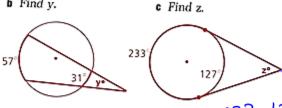

Solution Find m∠BEC first.

A
$$\angle$$
 BEC = $\frac{29 + 47}{2} = \frac{76}{2} = 38^{\circ}$

Problem 3 a Find x.

b Find y.

Solution

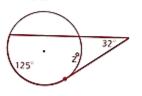

$$X = \frac{88+27}{2} = \frac{115}{2} = 57.5^{\circ}$$

$$Y = \frac{57-31}{2} = \frac{26}{2} = \frac{1}{2}$$

Problem 4 a Find y.

b Find z.

c Find a.

$$72 = \frac{21+7}{2}$$

123=4

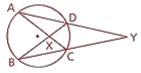

Problem 5

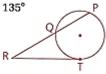

Find mAB and mCD.

Solution

7 Given:
$$\widehat{AB} = 108^{\circ}$$
, $\widehat{CD} = 62^{\circ}$

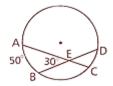

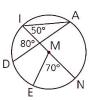

$$\widehat{AB} = 50^{\circ}$$

Find: CD

- 17 If a point is chosen at random on $\bigcirc M$, what is the probability that it lies on
- a IAN
- $\mathbf{b} \ \widehat{AN}$
- c ÎD
- d ÎE

Problem Set B

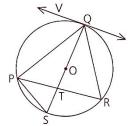

18 Given: \overrightarrow{VQ} is tangent to $\bigcirc O$ at Q. $\overline{\text{QS}}$ is a diameter of $\odot \text{O}$.

$$\widehat{PQ} = 115^{\circ}; \angle RPS = 36^{\circ}$$

Find:
$$\mathbf{a} \angle \mathbf{R}$$

- e ∠QPR
- i PRQ

- b ∠S
- j RSP
- c \widehat{SR}
- f ∠QPS g ∠QTP
- k ∠VQS
- $\mathbf{d} \widehat{\mathbf{QR}}$
- h ∠PQV
- I ∠QOP

Homework 10.5 5, 6, 10, 12, 16, 19, 21, 24, 25, 33

5 Find the measure of each angle or arc that is labeled with a letter.

10 Given: ∠P = 17°,

Find: SR

12 If $\widehat{ST}=85^\circ$, $\widehat{SQ}=95^\circ$, and $\widehat{TR}=175^\circ$, find $\angle P$.

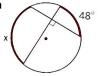

16 An inscribed angle intercepts an arc that is $\frac{1}{9}$ of the circle. Find the measure of the inscribed angle.

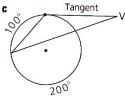

19 Given $m \angle P = 60$ and $\widehat{mPSR} = 128$, find $m \angle Q$, $m \angle R$, and $m \angle S$.

21 Find the measure of each arc or angle labeled with a letter.

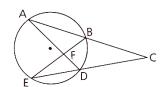

24 Given: $\angle AFE = 89^{\circ}$,

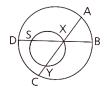

Find: \widehat{AE} and \widehat{BD}

25 Given: $\widehat{SY} = 112^{\circ}$, $\widehat{DC} = 87^{\circ}$

$$\widehat{DC} = 87^{\circ}$$

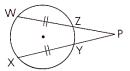

Find: \widehat{AB}

33 Given: $\overline{WZ} \cong \overline{XY}$,

$$\widehat{\text{WXY}} = 200^{\circ}$$

Find: $\angle P$

Classwork

Directions: Each problem is worth 2 points. Do the work on your own. Check your answers with a partner. Work together if there is a discrepancy. Hand in before you leave.

Given: O with diameter AD,

tangents BF and CF,

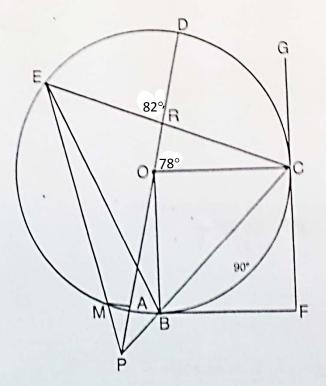

secants PE, PD, and PC

 $m \angle DOC = 78^{\circ}$

 $m \angle DRE = 82^{\circ}$

 $\widehat{\text{mBC}} = 90^{\circ}$

- 1 Find mLBFC.
- 2 Find mLCBF.
- 3 Find mDC.
- 4 Find mAB.
- 5 Find m/DPC.
- 6 Find m/BEC.
- 7 Find mLDRC.
- 8 Find mDE.
- 9 Find m/EMA.
- 10 Find mLOCB.
