10-5: Angles Relates to a Circle

Objectives

After studying this section, you will be able to

- Determine the measures of central angles
- Determine the measures of inscribed and tangent-chord angles
- Determine the measures of chord-chord angles
- Determine the measures of secant-secant, secant-tangent, and tangent-tangent angles

When the vertex of the angle is the **CENTER** of the circle

point of 2 rays, such as O

$$m \text{ central } \angle = m \text{ arc}$$

When the vertex of the angle is **IN** the circle (but not the center)

$$m \angle AEB = 180 - 95$$

$$\angle = \frac{n + n}{2}$$

$$m \angle CPD = \frac{30 + 20}{2} = \frac{50}{2} = 25^\circ$$

chord-chord or
sec - sec angles

Notes: Vertical angles are congruent. The angle measure is the **AVERAGE** of the arcs.

If a trend is **IN**, then it's perceived as a positive. (Add the angles.)

Problem 2

Find y.

x & y are supp

$$x = \frac{29 + 47}{2} = \frac{76}{2} = 38^\circ$$

$$\text{then } y = 180 - 38 = 142^\circ$$

Problem 3

a Find x.

$$x = \frac{27 + 88}{2} = \frac{115}{2} = 57.5^\circ$$

When the vertex of the angle is ON the circle

Remember the Carpenter's trick.

$\angle HKM$ is an *inscribed angle*.

$\angle PQR$ is a *tangent-chord angle*.

sec-sec:

Example 1

Given: $m\widehat{AC} = 112$

Find: $m\angle B$

$m\angle B = \frac{1}{2}(m\widehat{AC})$

tan-chord:

Example 2

Given: \overline{FE} is tangent at E.

$m\widehat{DE} = 80$

Find: $m\angle DEF$

When the vertex of the angle is OUT of the circle

$$\angle = \frac{\text{arc} - \text{arc}}{2}$$

$\angle V$ is a
secant-secant angle.

$\angle C$ is a
secant-tangent angle.

$\angle F$ is a
tangent-tangent angle.

$$\angle F = \frac{260 - 100}{2} = \frac{160}{2} = 80^\circ$$

Note: If a trend is OUT, then it's perceived as a negative. (Subtract the angles.)

Example 1 Find $m\angle A$.

$$\begin{aligned} m\angle A &= \frac{1}{2}(m\widehat{CD} - m\widehat{BE}) \\ &= \frac{1}{2}(100 - 20) \\ &= \frac{1}{2}(80) \\ &= 40 \end{aligned}$$

Example 2 Find $m\angle F$.

$$\angle F = \frac{200 - 60}{2} = \frac{140}{2} = 70^\circ$$

$$\widehat{JK} = 360 - 160 = 200$$

Example 3 Find $m\angle Q$.

$$\frac{260 - 100}{2} = \frac{160}{2} = 80^\circ$$

Problem 1 Given: \overline{AB} is a diameter of $\odot P$.

$\widehat{BD} = 20^\circ$, $\widehat{DE} = 104^\circ$

Find: $m\angle C$

$$m\angle C = \frac{56 - 20}{2} = \frac{36}{2} = 18^\circ$$

$$\begin{aligned} \widehat{BD} + \widehat{DE} + \widehat{EA} &= \text{semicircle} \\ 20 + 104 + \widehat{EA} &= 180 \\ \widehat{EA} &= 56 \end{aligned}$$

Mixed Practice

Problem 3

a Find x.

$$\frac{27+88}{2} = \frac{115}{2} = 57.5$$

b Find y.

$$\frac{57+31}{2} = \frac{88}{2} = 44$$

c Find z.

$$\frac{233-127}{2} = \frac{106}{2} = 53$$

Problem 4

a Find y.

$$2 \cdot \frac{21+y}{2} = 72 \cdot 2$$

$$\begin{array}{r} 21+y = 144 \\ -21 \quad -21 \\ \hline y = 123 \end{array}$$

b Find z.

$$2 \cdot \frac{125-z}{2} = 32 \cdot 2$$

$$\begin{array}{r} 125-z = 64 \\ -64+z \quad -64+z \\ \hline 61 = z \end{array}$$

c Find a.

$$ON \angle = \frac{a}{2}$$

$$65 = \frac{a}{2}$$

$$130 = a$$

Problem 5

Find $m\widehat{AB}$ and $m\widehat{CD}$.

$$m\widehat{AB} : \frac{x-y}{2} = 24$$

$$m\widehat{CD} : \frac{x+y}{2} = 65$$

$$x-y=48$$

$$x+y=130$$

$$\begin{array}{l} \text{Linear system} \\ \left\{ \begin{array}{l} x-y=48 \\ x+y=130 \\ \hline 2x=178 \\ x=89 \end{array} \right. \end{array}$$

$$\begin{array}{l} \text{If } x=89 \text{ then } 89+y=130 \\ y=41 \end{array}$$

Summary

If the vertex of the angle is ____ the circle	Then use this formula to find the angle's measure:
IN	$\angle = \frac{\text{arc} + \text{arc}}{2}$
ON	$\angle = \frac{\text{arc}}{2}$
OUT	$\angle = \frac{\text{arc} - \text{arc}}{2}$

10-5: Angles Relates to a Circle

1 Vertex at center:

Given: $\widehat{AB} = 62^\circ$

Find: $m\angle O$

2 Vertex inside:

Given: $\widehat{CD} = 100^\circ$, $\widehat{FG} = 30^\circ$

Find: $m\angle CED$

3 Vertex on:

a Given: $\widehat{AC} = 70^\circ$

Find: $m\angle B$

b Given: \overline{DE} is tangent at E.
 $\widehat{EF} = 150^\circ$

Find: $m\angle DEF$

4 Vertex outside:

Given: $\widehat{HP} = 120^\circ$,
 $\widehat{AM} = 36^\circ$

Find: $m\angle K$

Given: \overline{TU} is tangent at U.
 $\widehat{RU} = 160^\circ$,
 $\widehat{SU} = 60^\circ$

Find: $m\angle T$

Given: W and R are points of contact.
 $\widehat{WR} = 140^\circ$

Find: $m\angle X$

5 Find the measure of each angle or arc that is labeled with a letter.

6 Find the measure of each angle or arc that is labeled with a letter.

- 7 Given: $\widehat{AB} = 108^\circ$, $\widehat{CD} = 62^\circ$

Find: $\angle AXB$ and $\angle Y$

- 8 Given: $\widehat{TP} = 170^\circ$, $\widehat{PQ} = 135^\circ$

Find: $\angle R$

- 9 Given: $\angle AEB = 30^\circ$,
 $\widehat{AB} = 50^\circ$

Find: \widehat{CD}

- 10 Given: $\angle P = 17^\circ$,
 $\widehat{TQ} = 42^\circ$

Find: \widehat{SR}

- 11 If $\angle Y = 22^\circ$, $\widehat{WZ} = 125^\circ$, and \overleftrightarrow{YZ} is tangent at Z, find \widehat{XZ} .

- 12 If $\widehat{ST} = 85^\circ$, $\widehat{SQ} = 95^\circ$, and $\widehat{TR} = 175^\circ$, find $\angle P$.

- 13 Given: $\widehat{AB} = 85^\circ$,
 $\widehat{CD} = 25^\circ$

Find: $\angle AED$

- 14 Given: \overline{WY} is a diameter of $\odot E$.
 $\widehat{WX} = 50^\circ$, $\angle XPY = 120^\circ$

Find: \widehat{WZ}

- 15 A circle is divided into three arcs in the ratio of 3:4:5. A tangent-chord angle intercepts the largest of the three arcs. Find the measure of the tangent-chord angle.

- 16 An inscribed angle intercepts an arc that is $\frac{1}{9}$ of the circle. Find the measure of the inscribed angle.

- 17 If a point is chosen at random on $\odot M$, what is the probability that it lies on

a \widehat{IAN}

b \widehat{AN}

c \widehat{ID}

d \widehat{IE}
