- } NEED TO PROVE \cong \angle s before use.

No prs of \cong \angle s \rightarrow HL, need rt \angle s (not \cong \angle s) to state rt Δ .

If you say

- 1. $\angle A \cong \angle T$
 - 2. $\overline{CA} \cong \overline{CT}$ by $\Delta \cong \Delta$
- What needs to be first?

8 Reading marked diagrams

No.

Yes, HL

think
→ "x"

The ratio of the base of an isos Δ to its legs is 3:2
The perimeter is 56.
Find the length of each side.

Sum sides = perimeter
 $7x = 56$
 $x = 8$

$$\Delta_{\text{CAT}} \cong \Delta_{\text{DOG}}$$

$$\angle C = 50 \text{ \& } \angle D = x - 32$$

Find x.

$$\angle C = \angle D$$

$$50 = x - 32$$

$$\boxed{82 = x}$$

2 pages (front + back → 4 sides)

1 pg no calc

ORDER MATTERS!

$$\triangle JIM \cong \triangle DAN$$

$$\triangle IJM \cong \triangle ADN$$

Classify by	sides	\sphericalangle	\sphericalangle s
	EQUILATERAL		ACUTE
	SCALENE		RIGHT
	ISOSCELES		OBTUSE

$$A = \pi r^2$$

$$C = \pi d \text{ or } C = 2r\pi$$

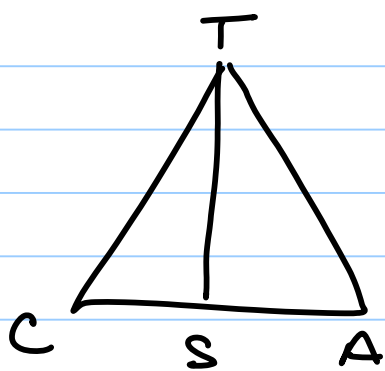

Exact.
leave in terms of π

$d = \frac{1}{2}$ find exact, $A = \frac{1}{16}\pi$ or $\frac{\pi}{16}$, $C = \frac{\pi}{2}$ or $\frac{1}{2}\pi$

$\rightarrow r = \frac{1}{4}$

$$d = 2r$$

If $\angle A = \angle C$
Is TS a median

Is equation setup

$$\angle A = \angle C$$

$$TC = TA$$

(~~$\Delta \Rightarrow \Delta$~~)

or $CS = SA$

Given

Correct

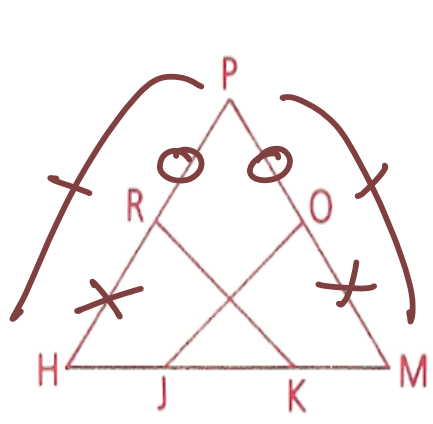

WRONG
