9-10: Trigonometric Ratios

Objective: After studying this section, I can use trigonometric ratios to solve right triangles.

Prior Knowledge: SOH CAH TOA.

Special families of right triangles $(30^\circ, 60^\circ, 90^\circ) \Leftrightarrow (x, x\sqrt{3}, 2x)$ & $(45^\circ, 45^\circ, 90^\circ) \Leftrightarrow (x, x, x\sqrt{2})$

Note Do not forget that an angle of elevation or depression is an angle between a line of sight and the horizontal. Do not use the vertical.

Q: How can I find the trigonometric value of any angle!?!?

A: The Unit Circle (which you will study in depth next year).

Signs of Quadrants & axes

$30^\circ, 60^\circ, 90^\circ$

$$\cos B = \frac{\sqrt{3}}{2}$$

$30^\circ, 60^\circ, 90^\circ$

$45^\circ, 45^\circ, 90^\circ$

Table of Trigonometric Ratios

$\angle A$	$\sin \angle A$	$\cos \angle A$	$\tan \angle A$	$\angle A$	$\sin \angle A$	$\cos \angle A$	$\tan \angle A$
1°	.0175	.9998	.0175	46°	.7193	.6947	1.0355

Problem 1

Given: Right $\triangle DEF$ as shown

Find: a $m\angle D$ to the nearest degree

b e to the nearest tenth

SOH
CAH
TOA

a: Table $\rightarrow \sin \angle D = \frac{op}{hy}$

$$\sin \angle D = 11.2 / 20.1$$

$$\sin \angle D = 11.2 / 20.1 = .5572139303$$

33°	.5446
34°	.5592

$$33^\circ < (\angle D) < 34^\circ$$

b. Calc $\rightarrow \sin \angle D = 11.2 / 20.1$

mode: degrees

$$m\angle D = \sin^{-1}(11.2 / 20.1)$$

$$\sin^{-1}(11.2 / 20.1) = 33.8633406$$

Problem 2

To an observer on a cliff 360 m above sea level, the angle of depression of a ship is 28° . What is the horizontal distance between the ship and the observer?

$$\tan 28^\circ = \frac{360}{x} \rightarrow x (\tan 28^\circ) = 360 \rightarrow x = 360 / \tan(28^\circ) \approx 677m$$

$$360 / \tan(28^\circ) = 677.0615275$$

Problem 3 Given the trig value, find the angle: If $\sin \theta = 0.7660$, find θ .

Method 1: Table

Method 2: Calculator (& what happens)

$$\sin \theta = 0.7660$$

49°	.7547
$\theta = 50^\circ$	.7660
51°	.7771

$$\sin^{-1}(0.7660) = 49.99603866$$

Method 3 (unless it's a special, this method is the least accurate if it's a quick sketch):
I don't have a table or calculator, but I can use the unit circle.

Treat: Trig Unit circle Trick

9-10: Trigonometric Ratios: 1-12, 14, & 15

1 Find each of the following in the Table of Trigonometric Ratios.

a $\sin 21^\circ$ **b** $\tan 52^\circ$ **c** $\cos 5^\circ$ **d** $\tan 45^\circ$ **e** $\sin 60^\circ$

a. $\sin 21^\circ = .3584$

b. $\tan 52^\circ = 1.2799$

2 Using the table, find $m\angle A$ in each case.

a $\sin \angle A = 0.4067$

b $\tan \angle A = 3.4874$

c $\cos \angle A = .7071$

24° .4067

3 Without using the table, find $m\angle A$ in each case.

a $\tan \angle A = 1$

$\tan \angle = \frac{\text{opp}}{\text{adj}}$

b $\sin \angle A = \frac{1x}{2x} = \frac{\text{op}}{\text{hyp}}$

c $\sin \angle A = \frac{\sqrt{3}}{2}$

Soh CAH ToA

4 In each case, find x to the nearest integer.

$$\sin 27^\circ = \frac{x}{40}$$

$$40(\sin 27^\circ) = x$$

5 Find the height of isosceles trapezoid ABCD.

$$\sin 38^\circ = \frac{x}{25}$$

$$25(\sin 38^\circ) = x$$

~~5b. Find the area of the trapezoid (above).~~

6 Solve each equation for x to the nearest integer.

a $\sin 25^\circ = \frac{x}{40}$

b $\cos 73^\circ = \frac{35}{x}$

c $\sin x^\circ = \frac{29}{30}$

$$x \cdot \cos 73^\circ = 35$$

$$x = 35 / (\cos(73^\circ))$$

$$x = \sin^{-1}(29/30)$$

7 A department-store escalator is 80 ft long. If it rises 32 ft vertically, find the angle it makes with the floor.

$$\sin x = \frac{32}{80}$$

$$x = \sin^{-1}(32/80)$$

8 Given the regular pentagon shown, with center at O and EN = 12 cm,

a Find $m\angle E$

$$180 - \left(\frac{360}{5}\right) = 108^\circ$$

b Find $m\angle NOM$

$$= 36^\circ$$

c Find OM to the nearest hundredth

d Find the area of $\triangle NOT$ to the nearest hundredth

e Explain how you could find the area of the pentagon

9 Find, to the nearest degree, the angles of a (3, 4, 5) triangle.

10 A sonar operator on a cruiser detects a submarine at a distance of 500 m and an angle of depression of 37° . How deep is the sub?

11 The legs of an isosceles triangle are each 18. The base is 14.

a Find the base angles to the nearest degree.

b Find the exact length of the altitude to the base.

12 One diagonal of a rhombus makes an angle of 27° with a side of the rhombus. If each side of the rhombus has a length of 6.2 in., find the length of each diagonal to the nearest tenth of an inch.

14 Find the length of the apothem of a regular pentagon that has a perimeter of 50 cm.

15 Two buildings are 100 dm apart across a street. A sunbather at point P finds the angle of elevation of the roof of the taller building to be 25° and the angle of depression of its base to be 30° . Find the height of the taller building to the nearest decimeter.
